

Author's Instructions

The *NDT Handbook*

Production and review of the *Nondestructive Testing Handbook* is coordinated under the oversight of the Technical Publications Division's Handbook Development Committee in the Technical Council of the American Society for Nondestructive Testing (ASNT). Contributions and peer review are conducted in association with the appropriate industrial and method committees of the Technical Council.

Manuscript Preparation

Please submit your text in electronic form by diskette or as an e-mail attachment. Format the text if possible for Microsoft Word, and please send a hard copy printout by postal or courier delivery so ASNT can verify the electronic files. ASNT staff will prepare your manuscript and format the text for typesetting and review.

Sequence

Equations, References, Tables and Figures are numbered sequentially in each chapter, beginning with 1. There are no decimals in the numbering sequence. Subsequencing using a, b (1a, 1b, etc.) is used only for adjacent figure parts, not for Tables or Equations.

Art

Hard Copy. Authors must provide all hard copy illustrations as high quality, *camera ready* prints. For photographs, *camera ready* means glossy prints on photographic paper, not dot matrix printouts or clippings from brochures or other printed matter. For line art, *camera ready* means high resolution output as from a 600 dpi laser printer. In such drawings, avoid shaded and pattern filled areas.

Electronic Files. Contributors are encouraged to submit illustrations as electronic files. Assume the image will be printed at 75 mm (3 in) wide. The images

should be high resolution (1200 dpi for line art, 300 dpi for photographs). ASNT supports GIF, JPG, PICT, TIFF and EPS formats. Please include a hard copy of art with your hard copy version manuscript so ASNT can verify the electronic files.

Do not electronically superimpose labels on photographic (including video capture) images. Instead, indicate labels on the accompanying hard copy. Include figure captions.

Video. Include video tapes or movie files with your submittal for possible use in a CD-ROM version of the *Nondestructive Testing Handbook*. If a photographic illustration is a frame captured from a video file, please send the accompanying movie as a separate file.

The Reader

Assume the typical reader has completed three years of college toward a degree in mechanical engineering or materials science and has the background of an elementary physics or mechanics course. The assumptions about the reader vary according to the subject in any chapter. Computer science requires a different background from nuclear physics, for example. It is not possible for the *NDT Handbook* to give all the background needed for nondestructive testing.

Do not assume your reader is already familiar with the material. Define key terms when you introduce them. Define all variables, constants and abbreviations that appear in equations and elsewhere. Handwritten notes in the margins of the hard copy manuscript may differentiate between zero and the letter *O*, the letter *X* and the multiplication sign, lowercase letter *L* and the numeral one.

Give all measurements in the metric system known as SI. Measurements in other customary units then follow in parentheses.

The *NDT Handbook* generally avoids abbreviations. Spell out words whenever possible, even for common initialisms such as radio frequency (RF) and alternating current (AC).

Author's Obligations to Sources

References

NDT Handbook authors are encouraged to extensively reference the literature on their subjects. Sources should include all important publications in the field.

References appear as endnotes on a separate page at the end of each chapter, not as footnotes. The reference list should contain all sources used, in the order they appear in the manuscript. If a reference is cited in two different places, the same number is used for it. Each source in the reference list should be typed in one of the following formats. Note the order of the information and the punctuation. Do not abbreviate titles in references.

The information in references should be as complete as possible — for example, spelling out journal titles and indicating volume, issue and inclusive page numbers.

Book:

15. Smith, J.A. and J.B. Doe. *Title of Book*, edition. Publisher's city: publisher's name (1993): p 1-10.

Article in periodical or collection:

16. Smith, J.A. and J.B. Doe. "Title of Article." *Title of Journal*. Vol. 1, No. 1. Publisher's city: publisher's name (January 1993): p 1-10.

17. Smith J.A. "Title of Article in Book." *Title of Book*, edition. Publisher's city: publisher's name (1993): p 1-10.

Paper presented at conference:

18. Smith, J.A. and J.B. Doe. "Title of Paper." Presented at *Name of Conference*. Location: sponsor (January 1993).

19. Smith, J.A. "Title of Article in Book." *Name of Proceedings Book* [location of conference, month and year]. Publisher's city: publisher's name (publication year): p 1-10.

Other types of sources (theses, brochures) if used should be credited as appropriate.

Quotations

Often it is more effective to use a paraphrase rather than a direct quote. In either case, credit must be given to the source by using references.

When a piece of information is not common knowledge (not in the public domain) and the *NDT Handbook* author

takes that information from a particular source (using either the source's exact words in quotation marks or a rewording), a reference number should follow the wording as part of the *NDT Handbook* manuscript.

Permissions

The author must get permission to reprint text or illustrations that have been used in other publications or belong to other parties. The author must obtain permission to reprint from the copyright holder. The copyright holder might be an individual, a publishing house or the organization for which the material was produced. Permission may be obtained by using forms provided by ASNT. Signed and completed forms should accompany the manuscript submitted to ASNT.

Figures (photographs or line drawings) and tables taken from other publications are copyrighted and require permission to adapt or reproduce for publication.

Tracing an illustration or making minor changes to its design do not eliminate the need for permission. The ideas for an illustration — what information is shown, how the information is gathered and displayed, the conclusions it represents — are protected by copyright law. Copyright holders of illustrations are credited in a special section of the book set aside for that purpose. The author is required to provide with the manuscript a list of all figures and the source that should be credited for each.

Permission is required for quotes or paraphrases of text that are lengthy and contain original or significant ideas, or unique analyses or formulas. Short quotes do not require permission and are credited using the reference page.

Trade Names

To avoid commercialism, avoid mentioning trade names. When equipment is being discussed and that equipment varies only a little from manufacturer to manufacturer, there is no need for trade names or model numbers. Use generic terms for products: *polyaramid* instead of *Kevlar*[®] and *acrylic* instead of *Plexiglas*[®].

For More Information

Contact the Handbook Editor, ASNT, 1711 Arlingate Lane, PO Box 28518, Columbus, OH 43228-0518. Phone 800-222-2768 or (614) 274-6003; pmoore@asnt.org.
