Since 1998, AMS has been committed to providing accurate, proactive material evaluation, cleaning and finishing of safety critical parts for the automotive industry. We conduct high speed, high throughput inspections of components using ultrasonic testing (UT), acoustic resonance testing (AT), and eddy current testing (ET). We work closely with client partners to determine which NDT method or combination of methods will deliver the ideal solution for 100% containment of potential defects at best overall value.

We can combine non-destructive testing with cleaning and packaging to ensure only 100% conforming materials arrive at your plant sorted, cleaned and packed ready for production. So whatever your challenges speak with us to develop a solution that is efficient, affordable and effective.
